

# Workforce Management Strategic Enterprise Deployment Assessment

## Get Maximum Value From Your Kronos Investment

You need to take full advantage of your Kronos® system in order to achieve smart value fast and realize maximum return on your investment. When your workforce management solution is operating at its best, you reap the benefits of automated transactions, streamlined processes, more accurate payroll, reduced costs, and increased compliance with labor laws and industry regulations. All of this adds up to higher efficiency and productivity, allowing your team to focus on what really matters: growing the business and improving results.

Because labor is the largest controllable expense for most organizations, optimizing workforce management can have a huge impact on the bottom line — even when budgets are tight. That's why it's so important to determine whether your Kronos system is being used to its full advantage. Start by asking yourself these questions:

- Do we have a clearly defined and cohesive deployment strategy?
- Have we optimized workforce management processes and tools enterprisewide?
- How can we improve visibility and collaboration across the enterprise?
- Are we able to track performance and measure success criteria?
- Do we need to reduce overall project costs while improving user adoption?
- Have we standardized tools, processes, and policies throughout the enterprise?
- Does our deployment strategy include plans for long-term growth?

Whether you lack clear answers to these questions or you simply want to make sure your Kronos solution continues to meet your goals and requirements, a Strategic Enterprise Deployment Assessment can help.

The Strategic Enterprise Deployment Assessment examines your workforce management deployment and provides actionable strategies to help you optimize resources and realize even better return on your Kronos investment. The assessment can be performed as you prepare for a consolidation or when you're ready to deploy a new workforce management process or solution.

## Key Benefits

- » **DEVELOP A DEPLOYMENT STRATEGY** that is both cohesive and clearly defined
- » **CONSOLIDATE DISPARATE SYSTEMS** and processes for greater efficiency and cost savings
- » **IMPROVE USER ADOPTION RATES** to get more value from your Kronos system
- » **STANDARDIZE TOOLS AND PROCESSES** for streamlined, consistent automation enterprisewide
- » **PLAN FOR LONG-TERM GROWTH** by taking into account scalability, integration, and globalization
