

Workforce Dimensions™ Work for Manufacturing

Improve Operational Performance with Real-Time Insights into Productivity

Improve Workforce Utilization and Productivity

No matter what sector of manufacturing you're in, labor costs are one of your biggest expenses. These costs are tightly intertwined with labor productivity, or the output from an employee over a specified amount of time. Gaining insight into the work performed allows you to improve the efficiency of your labor productivity while lowering or maintaining your labor costs.

But to see and track labor costs with precision, you'll need more than error-prone clipboards and notepads. Because antiquated manual systems won't give you the visibility into your operations that you need. In fact, most of today's systems fall short.

The Workforce Dimensions™ Work solution from Kronos gives you the tools you need to automate and reconcile all your paid time to labor. With complete, real-time visibility into how your operations perform against productivity goals and benchmarks, you gain the power to make truly effective, knowledge-based decisions in the moment – before your bottom line is at risk.

Key Benefits

- » **IMPROVE WORKFLOWS** through simplistic integrations and accessible APIs
- » **ENHANCE THE EMPLOYEE EXPERIENCE** through flexibility, smart forms, and simplistic data entry
- » **DRIVE OPERATIONAL EFFICIENCIES** with real-time visibility into labor data
- » **INCREASE PRODUCTIVITY** and efficiencies with accurate standards

Workforce Dimensions™ Work for Manufacturing

Improve Operational Performance with Real-Time Insights into Productivity

Improve workforce productivity

With Workforce Dimensions Work, there is no need to struggle to access labor information in multiple disparate systems. At any point, you can view the status of every project or work order in progress. Information is available as soon as it is captured by the system, not hours later. So you can recognize constraints and delays, identify idle employees, and redeploy resources to proactively align capacity with demand. All this helps determine which activities need attention, so you can easily make decisions to improve workforce performance.

Gain valuable insights into labor costs and performance

Workforce Dimensions Work enables manufacturing organizations to accurately track the time spent by employees on tasks throughout the workday. By providing real-time access to labor data, Work provides much-needed visibility into actual labor costs as well as valuable insight into how your operations are performing against productivity goals and benchmarks.

With Workforce Dimensions Work you can gain even greater insight with the ability to better track time against production orders, jobs, and tasks. This insight allows you to view how your labor measures up against labor standards, removing the guesswork from your labor costs.

Redefine your standards

Are your workforce performance standards based on your underperformers? Why not change the way you do business and base your standards on your peak performers? With Workforce Dimensions Work providing real-time visibility to this data, you can re-evaluate your business operations and redefine your standards to measure against the best, resulting in improved operational performance.

Reconcile all paid time

What happens to paid time that's never assigned to a project or production operation? Could it account for your inconsistent revenues or profit margins? How would you know? If you can't capture this time, then your actual labor costs can't be accurately calculated. And apart from having to live with inaccurate cost figures, you also have to make do with limited insight into the causes behind revenue variances – and guess at what corrective actions need to be taken.

With Workforce Dimensions Work, you can create and track labor tasks and sub-tasks. You can measure actual labor productivity to achieve 100 percent reconciliation of paid time to labor. With Workforce Dimensions Work you are empowered to make better business decisions based on deep insight instead of guesswork, so you can make accurate commitments to your customers.
