

Kronos webTA Advanced Reporting

Drive better decision making with a richer reporting experience

Federal government agencies are striving to manage the workforce effectively while satisfying accountability and fiscal responsibility mandates. Successfully addressing these dual challenges requires the ability to transform raw workforce data into meaningful information that fuels better decision making. If your agency manages a complex multisector workforce, basic reporting capabilities may not be enough. You need powerful yet easy-to-use reporting tools that let you present, analyze, and share labor data for strategic, cost-effective workforce management.

Kronos® webTA™, our time tracking, attendance, and labor management solution for federal government agencies, provides a comprehensive set of standard reports. The optional webTA Advanced Reporting environment extends these standard reporting capabilities to deliver a richer reporting experience through enhanced interactivity, customized report authoring, and expanded export formats. Ad hoc reporting features are available via an intuitive interface to support fast and easy report creation, customization, and data analysis. In addition, webTA Advanced Reporting enables report delivery across a distributed environment.

With webTA Advanced Reporting, your managers and HR administrators get the robust reporting tools they need to make more informed resource and budget decisions.

Key Benefits

- » **CREATE OR CUSTOMIZE REPORTS** quickly and easily — with no IT support required
- » **EXPORT REPORTS TO OTHER SYSTEMS** with expanded export file format options
- » **PERFORM DATA ANALYSIS** to gain insight into labor cost and productivity trends

▼	Leave Balance - Balance Type	Leave Type	75	+	X
▼	User - Organization Name	Organization	75	+	X
▼	User - Display Name with User ID	Employee	76	+	X
▼	Leave Balance - Leave Year/Pay Period	Pay Period	75	+	X

Ad Hoc Reporting: Capture and present the critical data to answer your unique questions.

Self-service report creation and customization

With webTA Advanced Reporting, users can author new reports without burdening your agency’s IT staff or software application developers. An intuitive interface makes it easy to create and customize reports to meet your specific requirements and guide better decision making.

Ad hoc reporting for time and attendance insights

New reports are saved in the webTA reports repository. Authorized users can perform ad hoc queries on these reports to get a snapshot of specific time and attendance data. For optimal flexibility, webTA Advanced Reporting gives you full control over sorting, filtering, and grouping of data. You can even customize standard webTA reports by adding columns, changing headings, expanding data, and more to meet your unique needs.

Data analysis for identifying cost and productivity trends

The webTA Advanced Reporting module provides online analytical processing (OLAP) that supports detailed analysis of time, attendance, labor management, and activity management data. These robust OLAP capabilities allow you to identify and explore trends, patterns, anomalies, and correlations that may affect workforce productivity as well as your labor budget.

With webTA Advanced Reporting, you can slice, dice, and drill down into report data to gain valuable insights and draw actionable conclusions regarding employee productivity, resource balancing, and labor costs.

Multiple options for exporting report data

webTA Advanced Reporting allows you to export reports in multiple file formats including PDF, HTML, XLS, or CSV. These flexible export options strengthen the link between human resource and finance systems while enhancing interagency collaboration through simplified information sharing.

Meet your workforce management goals with Kronos

Kronos is a leading provider of workforce management and human capital management cloud solutions. Our commercially available, off-the-shelf time and attendance, leave, and labor management solutions are specifically designed to support federal government directives regarding efficiency, transparency, and accountability. Tens of thousands of organizations — including half of the Fortune 1000® and more than 100 federal government agencies — use Kronos every day.
